Figure 1 is a line graph showing the number of species over time for two groups: 'No treatment' (red line) and 'Treatment' (blue line). The x-axis is 'Time' (0 to 200) and the y-axis is 'Number of species' (0 to 20). The 'No treatment' group shows a sharp decline in species number over time, while the 'Treatment' group shows a more stable, slightly increasing trend. A black line represents the expected trend for the 'No treatment' group.

Figure 1 is a line graph showing the number of species over time for two groups: 'No treatment' (red line) and 'Treatment' (blue line). The x-axis is 'Time' (0 to 200) and the y-axis is 'Number of species' (0 to 20). The 'No treatment' group shows a sharp initial drop from ~18 to ~10 species, followed by fluctuations between 5 and 15. The 'Treatment' group starts at ~18, drops to ~15, and then fluctuates between 12 and 20. A horizontal black line is drawn at y=10.

Figure 1 is a line graph showing the number of species over time for two groups: 'No treatment' (blue line) and 'Treatment' (red line). The y-axis is labeled 'Number of species' and ranges from 0 to 20. The x-axis is labeled 'Time' and ranges from 0 to 200. The 'No treatment' group starts at approximately 18 species and fluctuates between 13 and 20 species. The 'Treatment' group starts at approximately 18 species and fluctuates between 2 and 14 species. A horizontal line is drawn at approximately 10 species.

Figure 1 is a line graph showing the number of species over time (0 to 200) for three different scenarios. The y-axis is labeled 'Number of species' and ranges from 0 to 20. The x-axis is labeled 'Time' and ranges from 0 to 200. The blue line (top) represents a scenario with a constant number of species around 15-18. The red line (bottom) represents a scenario with a constant number of species around 1-5. The black line (middle) represents a scenario with a decreasing number of species from 10 to 8.5.
