Figure 1 is a line graph showing the number of species over time (0 to 200) for two groups: 'Species that were not in the 1990s' (blue line) and 'Species that were in the 1990s' (red line). The y-axis represents the 'Number of species' (0 to 20). The blue line starts at approximately 18 and decreases to about 10. The red line starts at approximately 18 and drops sharply to about 2, then fluctuates between 1 and 8. A black line represents the expected trend for the blue group, showing a slight decrease from 10 to 9.

The graph displays the number of species over a period of 200 time units. The y-axis, labeled 'Number of species', ranges from 0 to 20. The x-axis, labeled 'Time', ranges from 0 to 200. Two data series are plotted: a blue line for the 'No treatment' group and a red line for the 'Treatment' group. The blue line fluctuates between approximately 14 and 20, while the red line fluctuates between approximately 4 and 15. A horizontal black line is drawn at y=10, indicating a baseline or control level.

The graph displays the number of species over time for two groups. The blue line represents one group, starting at approximately 18 species and fluctuating between 14 and 20 species. The red line represents the other group, starting at approximately 18 species and fluctuating between 2 and 12 species. Both lines show a slight downward trend over time.

Figure 1 is a line graph showing the number of species over time for two groups: 'No treatment' (blue line) and 'Treatment' (red line). The x-axis is 'Time' (0 to 200) and the y-axis is 'Number of species' (0 to 20). The 'No treatment' group starts at approximately 18 species and fluctuates between 14 and 20 species. The 'Treatment' group starts at approximately 18 species and drops sharply to about 10 species by time 20, then fluctuates between 5 and 13 species. A horizontal line is drawn at approximately 10 species.

Figure 1 is a line graph showing the number of species over time for two groups: 'No treatment' (red line) and 'With treatment' (blue line). The x-axis is 'Time' (0 to 200) and the y-axis is 'Number of species' (0 to 20). The 'With treatment' group shows a higher and more stable number of species compared to the 'No treatment' group, which shows a significant decline after an initial peak.
